

Inspecting for Retroreflectivity

September 28, 2018 • 8:30 AM - Noon

WVDOH-D1 Headquarters - 1340 Smith Street • Charleston, WV 26503

Traffic signs provide an important means of communicating information to road users and they need to be visible and effective. Since drivers cannot see as many visual cues as they can during the day, this places greater reliance on signs and other traffic control devices. To provide nighttime visibility, most signs are made from retroreflective sheeting, which is the property of a material that re-directs light back to the originating source.

Objectives

- Understand the *Manual on Uniform Traffic Control Devices* requirements
- Understand sign inspection methods that can be used to evaluate sign retroreflectivity in compliance with new requirements
- Learn traffic sign inspection techniques that can assess sign retroreflectivity

Who Should Attend

This class should be of interest to roadway personnel who install and maintain signs and who want to learn more about the assessment methods that can be used to comply with the *Manual on Uniform Traffic Control Devices* requirements.

Registration Information

There is no cost to attend; however, pre-registration is required. Register online at wvltap.wvu.edu or complete the registration information below and fax to Kim at 304-293-7109.
